Shifting Systems in the Climate Decade

Climate Group's COP26 Roundtable Series

Thursday, 4 November – Tuesday, 9 November 2021

 **CLIMATE GROUP**

Shifting systems in the Climate Decade

Climate Group's COP26 roundtable series

Overview

As COP26 approaches, the world is living with the impacts of climate change. Our climate and environmental boundaries are being tested and our systems are changing faster than we expected.

With world leaders set for critical climate negotiations in Glasgow, Climate Group presents the Shifting systems roundtable series designed to unite and connect leaders in policy, business, finance, and advocacy to share, support and shift systems and realise net zero futures. Each roundtable brings together critical stakeholders from across Climate Group's networks to co-create a series of recommendations for short term action that will start to shift critical elements within key emitting systems, towards a net zero future.

Systems change for a net zero future requires radical collaboration which is only possible if these stakeholders work together and utilise their influence in specific areas. This series asks participants to share best practice, lessons learnt, and the challenges they face to support the development of key recommendations for short term action that can shift key systems towards a net zero future.

Aims:

- **Share** cross sector and cross industry learnings to support systems shifts.
- **Support** the development of key action areas to shift systems in the short and long term.
- **Shift** critical elements and understand the levers that can result in shifting systems.

Objectives:

- **Prioritise:** Understand what must be prioritised to create systems change for the short, medium and longer term from different perspectives.
- **Prepare:** Learn from different stakeholders on how to prepare your organisation to have an impact and what you can do to contribute to shifting systems.
- **Pathways:** Develop a set of recommendations for business, governments, NGOs, and financiers to take real short-term actions and help shift the system being discussed.

Schedule:

Thursday 4th November

Monday 8th November

Tuesday 9th November

07:00

08:00

09:00

10:00

11:00

12:00

13:00

14:00

15:00

16:00

17:00

Shifting systems roundtable

Asia energy: Funding the phase out of coal

Shifting systems roundtable

Justice: Embedding environmental and social justice

Shifting systems roundtable

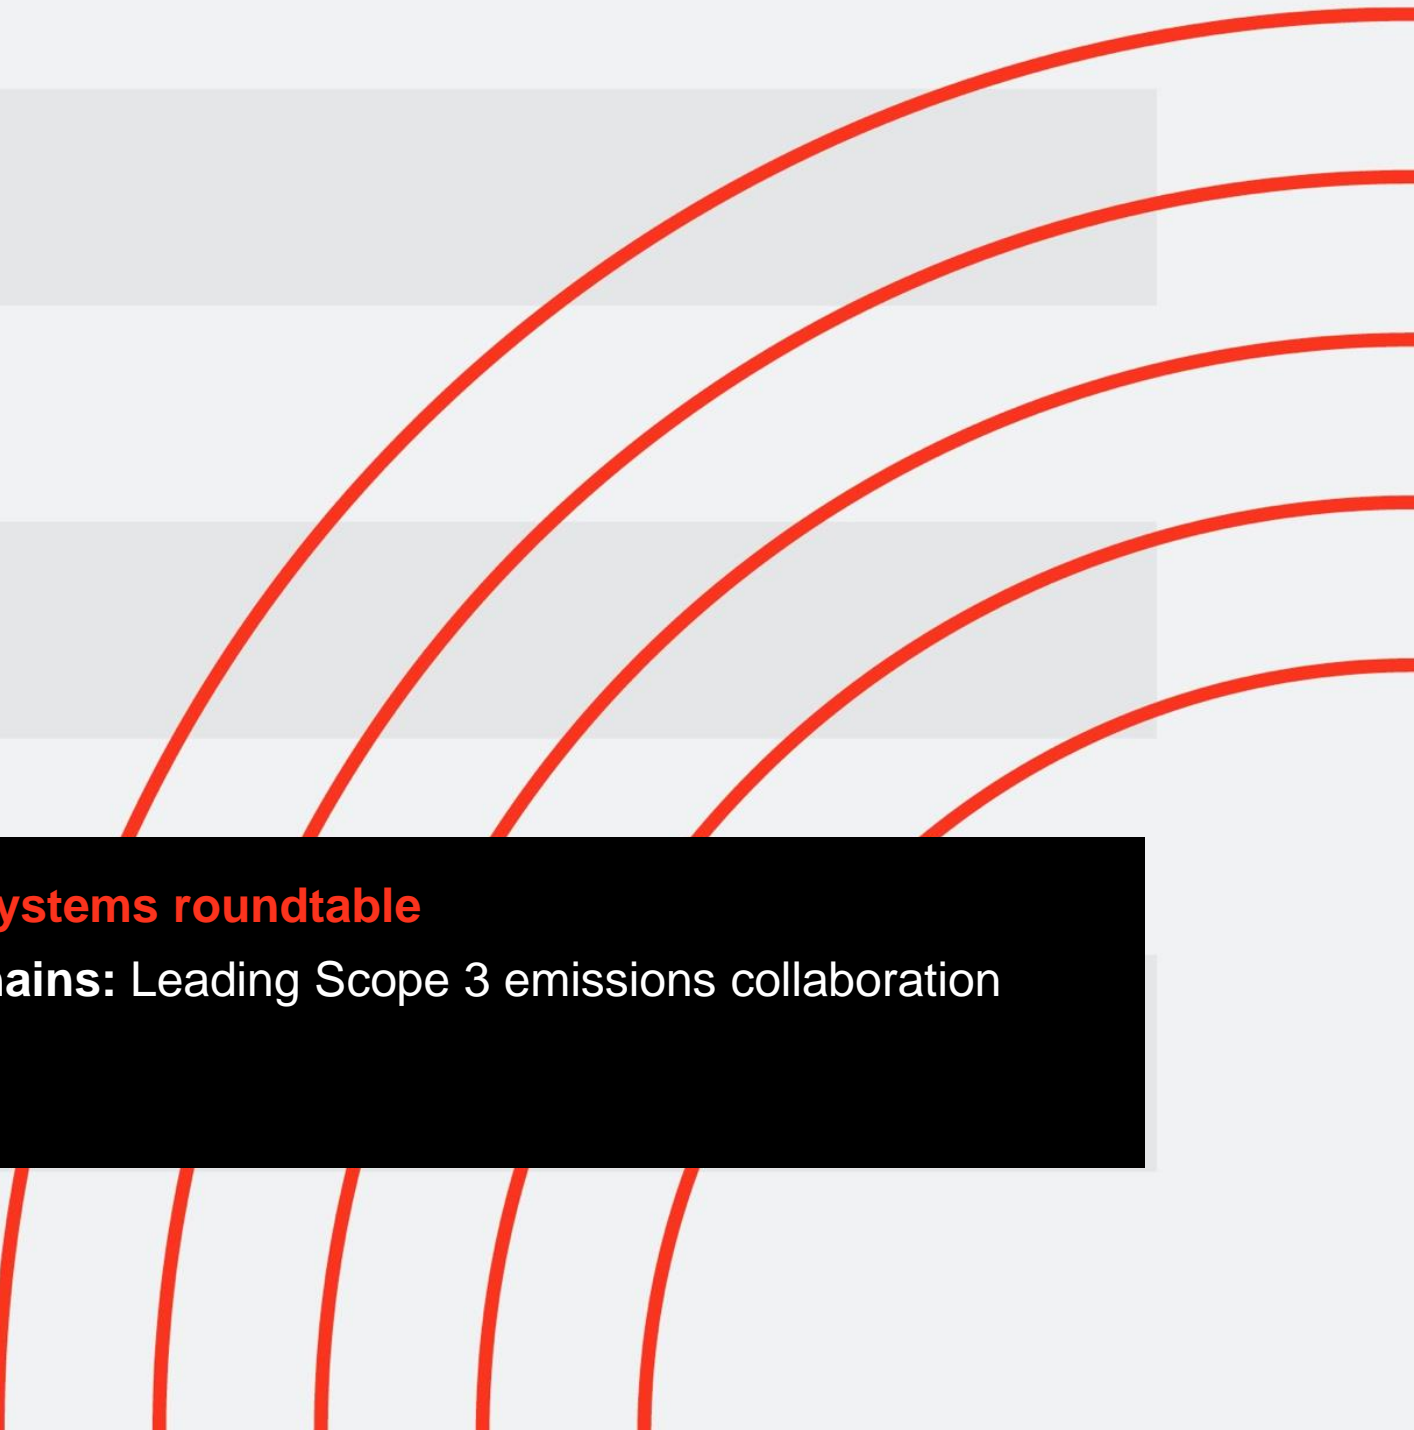

Industry: A net zero materials revolution

Shifting systems roundtable

Finance: Banking on systems change

Shifting systems roundtable

Supply chains: Leading Scope 3 emissions collaboration

Shifting systems – supply chains: *Leading Scope 3 emissions collaboration*

Overview:

Addressing Scope 3 emissions and driving supply chain resilience in the era of climate change could be the next big frontier for business action, but what does proactive collaboration really mean and how do we build resiliency into supply chains?

Leading on Scope 3 collaboration requires organisations to rethink how they engage with suppliers, taking a more collaborative approach to co-create solutions and adopt long-term changes to build resiliency. But to create fundamental shifts across industries, organisations must work together.

This roundtable brings together leaders from across the industry spectrum to share lessons learnt, best practice and the opportunities that lie ahead if organisations put competition aside and design collaborative strategies to tackle shared challenges.

Aims:

- **Share** best practice, advice and lessons learnt from current supplier engagement programmes and objectives.
- **Understand** how to measure success and engagement, what works and what needs to be improved.
- **Improve** efficacy of engagement through cross sector and cross industry learnings.
- **Radical collaboration** is needed across and between industries to deepen Scope 3 emissions collaboration and create resiliency across the sectors.

Outcomes:

- Design a set of key action areas and recommendations for other organisations to meaningfully engage with stakeholders to address Scope 3 emissions and demonstrate why industry collaboration is greater than competition.

Location:

Date:

Tuesday, 9 November

Time:

3:30pm – 5:00pm GMT

Arrive by:

3:15pm (15 minutes before)

Venue:

[Equator](#)

Roundtable

Hybrid

Moderator:

Joan MacNaughton CB HonFEI
Chair
Climate Group

Hosted by:

Nancy Mahon
SVP Global Corporate
Citizenship and Sustainability,
The Estée Lauder Companies

Sue Fox
