Creating sustainable places is a key part of Landsec’s purpose. As one of the largest real estate companies in Europe, Landsec is therefore designing, developing and managing buildings in ways that enhance the health of the environment and improve quality of life for its people, customers and communities.

A crucial part of this is ensuring the company’s continued leadership in energy efficiency. In 2016, Landsec thus set an energy efficiency target with EP100. This signalled a vital step in establishing a credible milestone towards achieving Landsec’s ambitious carbon reduction goals.

Landsec was one of the first companies globally to join three of Climate Group’s campaigns, EP100 (energy efficiency), RE100 (renewables), and EV100 (electric transport), and, convinced of the power of these initiatives to shift global markets and policies in a more positive direction, it has also more recently joined SteelZero.

"Landsec’s energy efficiency target underpinning our EP100 commitment drives accountability, supports planning and ultimately leads to accelerated action."

Jennie Colville
Head of ESG and Sustainability
